EDUCATION

University of California, Berkeley

MS, Information and Data Science

In Progress

Berkeley, CA

University of Washington, Bothell

BA, Management Information Systems

January 2016

Bothell, WA

Western Washington University

BS, Manufacturing Engineering Technology

June 2013

Bellingham, WA

WORK EXPERIENCE

Data Scientist - Full Stack

Core Analytics | The Boeing Company

Mar. 2026 – Current

Seal Beach, CA

Data Systems Engineer - 747/767/OOP Technical Lead

Reliability Maintainability & Data Analytics | The Boeing Company

Apr. 2023 – Mar. 2026

Seal Beach, CA

- Monitored reliability data feeds by using SQL, Power BI, and Tableau to validate data quality and integrity.
- Developed internal tools and applications that automated Python and SQL workflows, streamlining reporting processes, reducing manual effort, and accelerating delivery of analytics.
- Integrated AI/LLMs into our data ingestion process allowing us to handle non-English maintenance text.
- Represented Boeing at aviation industry meetings and conferences, facilitating collaboration with airline reliability teams to enhance the safety and quality of Boeing airplanes.

Manufacturing Engineer

787 Engines, 767/767-2C Tanker Fuel Systems | The Boeing Company

Sep. 2016 – Nov. 2020

Everett, WA

PROJECTS

Mox-Data.com | [Link](#) | [GitHub](#)

- Developed a full-stack web application using Python (Flask), HTML, JavaScript, and CSS to provide interactive dashboards and data management features for Magic: the Gathering Online (MTGO) players.
- Built ETL workflow allowing players to upload and process raw gameplay files, transform them into structured data, and enhance records through in-app tools.
- Deployed application to AWS using Docker (ECR) containers with PostgreSQL (RDS) for relational storage, Amazon S3 for file management, and Celery + Redis (ElastiCache) for distributed background job processing.
- Used Git/GitHub for version control and project management.

API.VintageData.IO | [Link](#) | [GitHub](#)

- Developed an ETL pipeline using Python to extract community-collated match result data from MTGO tournaments before cleaning and loading it into a PostgreSQL (AWS RDS) database.
- Deployed a public REST API with Flask using AWS EC2, enabling users to query event and match data.
- Automated weekly data processing and monitoring via cron jobs and API logging.
- Designed and built dashboards to visualize metagame trends, event histories, and matchup statistics.
